Fix lỗi nvram migrate từ vsan 8 qua vsan 6.5

Recent Tasks	Alarms
Target ↑	Status
10.5.18.22	Failed to deploy OVF package.
10.5.18.22	Failed to deploy OVF package.

OVF templates created in a 6.7 environments can only be deployed into 6.7 environments with the vSphere Client (HTML5) as it supports OVF files that contains an NVRAM file.

Workaround:

To work around this issue:

1. Export the OVF from the 6.7 environment.
2. Once exported, edit the OVF file and remove all the NVRAM entries:

```
<file ovf:id="file3" ovf:href="<VM Name>.nvram" ovf:size="8684"/>
<vmw:ExtraConfig ovf:required="false" vmw:key="nvram" vmw:value="ovf:/file/file3"/>
```

Notes: If using the OVFtool make sure to use the `skipManifestCheck`. This allows the OVF to be created after removing the references to NVRAM. Without this command, the OVF Tool would not be able to confirm the manifest file and will return an error.
